

# CHEMICAL AND HYDROCARBON PROOF SPILL CONTAINMENT

SPILLS BE  
DAMMED

- △ Commonly known as duck ponds, or berms, our collapsible spill containment products are designed for compact storage, ease of transport and rapid deployment.
- △ All of the structure is built in, so there are no pieces to install onsite or forget at the shop yard. Just unfold it and stand up the sidewalls.
- △ 6" and 12" sidewall units have integral structured walls, while the 4" soft-walled duck ponds are self supporting.
- △ Like other Ark Flood and Dam Resources products, our spill containment products are reusable, repairable, and responsible.
